

2. Spam Email Classifier using SVM

Code:-

```
from sklearn.feature_extraction.text import CountVectorizer
```

```
from sklearn.svm import SVC
```

```
emails = [  
    "Congratulations you won a lottery",  
    "Claim your free prize now",  
    "Meeting scheduled tomorrow",  
    "Project report submission",  
    "Win cash instantly",  
    "Let's discuss the assignment"  
]
```

```
labels = [  
    "spam",  
    "spam",  
    "ham",  
    "ham",  
    "spam",  
    "ham"  
]
```

```
vectorizer = CountVectorizer()
```

```
X = vectorizer.fit_transform(emails)
```

```
model = SVC(kernel='linear')
```

```
model.fit(X, labels)
```

```
while True:

    email = input("\nEnter email text (or 'exit'): ")

    if email.lower() == "exit":

        break

    test = vectorizer.transform([email])

    prediction = model.predict(test)

    print("Prediction:", prediction[0])
```
